

Griffin Hydraulic Driven Submersible Pumps

Features:

- Models available include Trash Pumps, Axial Flow Pumps & Materials Handling Pumps
- Stainless steel pumps handle caustic and leachates
- Special 6" models designed to fit standard manholes
- Designed to handle sludge, trash, raw sewage, clear liquid and industrial effluent
- Pumps capable of 140 ft of head and 20,000 gpm.

4MHL used on a bridge piling job to circulate drilling mud and evacuate the hole.

Model 24AX

Griffin's Hydraulic Driven Submersible Pumps are available in trash, axial flow and materials handling models. The pumps range from 4" to 24" with a variety of impeller designs. These pumps are designed for handling high volumes of water. Some models may also be used for high pressure applications.

Hydraulic driven submersible pumps are capable of handling flow up to 20,000 gpm and head conditions up to 140 ft. The impellers can handle solids up to 3".

Griffin's material handling pumps are designed to fit in standard manholes for sewer bypass operations and liquids with heavy trash and solids content.

Griffin's trash pumps are good for general pumping applications such as coffer cells or pumping lakes or ponds. Griffin's axial flow pumps are excellent for high flow situations such as river bypass or dam repairs.

Contact Griffin for more information and options available.

Griffin Hydraulic Driven Submersible Pumps

250 Series Hydraulic Power Unit

400 Series Hydraulic Power Unit

600 Series Hydraulic Power Unit

800 Series Hydraulic Power Unit
